Incident Details

P1 — CRITICAL

INCIDENT TYPE

OOMKill Cascade

AFFECTED POD

payments-api-7d9f4c-xkp2r

NAMESPACE

production

CLUSTER

neurascale-prod-k8s-01

DETECTED AT

2026-06-17 · 03:14:22 UTC

MEMORY USAGE

512Mi / 512Mi (100% — hard limit hit)

RESTART COUNT

7 restarts in 12 min

PROPOSED FIX

Scale memory limit → 768Mi (+50%)

BLAST RADIUS

1 pod · 0 downstream dependencies flagged

EST. COST IMPACT

\$2,847 downtime saved

AI Triage Analysis

LLAMA-3.3-70B · GROQ

AI RECOMMENDATION

OOMKill confirmed on payments-api pod. Memory limit of 512Mi is consistently exceeded under peak load. Root cause: uncached DB query loop introduced in deploy v2.4.1-hotfix . Recommend increasing limit to 768Mi (+50%) and adding memory alert at 80% threshold. Safe to execute — blast radius is isolated to 1 pod.
